

Ergonomic Assembly/Work Station

An Ergonomic State of Mind.

Its no secret that people come in all different shapes and sizes, and what's good for one is not always good for another. Naturally, people who are strong, healthy, and happy are able to be more productive and creative, which in turn brings success to their respective businesses. That's why Tekno's engineers have designed and built an exclusive new product: A completely adjustable, fully modular Ergonomic Assembly/Work Station.

Ergonomics is loosely defined as the science of fitting the job to the worker, rather than physically forcing the worker's body to fit the job. Many national studies have shown the benefits of reducing worker stress and preventing physical injury, and how these practices can save billions annually in health care and insurance costs. The result of these savings on the "bottom line" are far too significant to ignore.

With these exciting new work tables, gone are the days of repetitive stooping and bending. Wear and tear on employees will be drastically reduced, resulting in a healthier work environment. For the safety driven workplace, these Assembly/Work Stations are a must. *Continued...*

Ergonomic Assembly/Work Station

Key Benefits and Features:

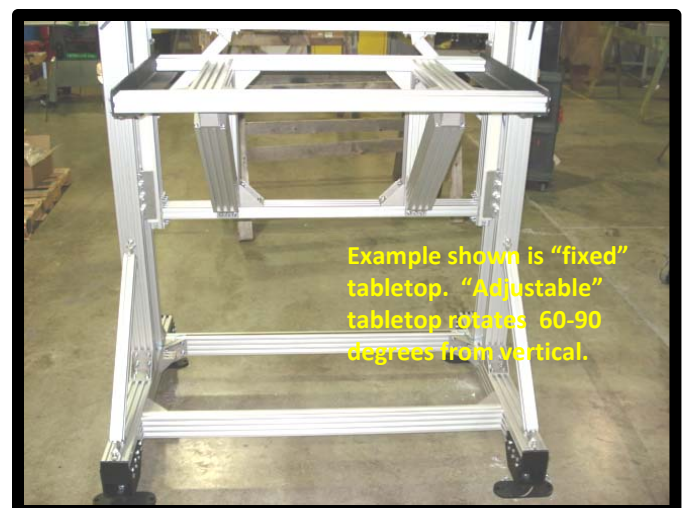

Extraordinary Flexibility: Our new work stations set the standard for versatility. The worktable features rotational adjustment of 60-90 degrees from vertical, allowing operators to customize the angle at which they best operate. The height of the tabletop has approximately 24 inches of pneumatic adjustment, easily accommodating operator preference. All work stations employ locking mechanisms that prevent the tabletop work area from falling at any orientation. These locking mechanisms eliminate drifting, creating a positive lock that further ensures the safety of employees.

State of the Art Overhead Connectivity: The power distribution box, located on the overhead section, includes a jack that allows you to connect up to four Cat-5 cables. This exclusive feature allows the use of Ethernet, and the possibilities are limitless. Also featured are four 110 volt electrical outlets and three quick-disconnect air couplings. Florescent lighting provides an extremely well-lit work area, and our overhead tool-rail trolley system allows operators to suspend tools above the work area and easily move them out of the way when not in use. Adjustable work-instruction holders also come standard.

Unmatched Strength and Durability: As with all of our Modu-Tek structures, these work stations are framed using our clear-anodized extruded aluminum profiles, meaning they will never rust, corrode, or require painting! Tabletops support 1000 lbs. of deadweight when positioned at 90 degrees from vertical (this number includes the weight of tabletop carriage and tabletop material).

Configurable Options: Choose any width from 24 to 72 inches wide; choose between "fixed" tabletop (does not rotate but retains vertical adjustment) or "adjustable" tabletop (both rotational and vertical adjustment).

Call or visit us on the web today for more information!

Example shown is "fixed" tabletop. "Adjustable" tabletop rotates 60-90 degrees from vertical.
