Tekno Inc. is a company that has a product that exceeds all other products. Tekno's conveyors are modular by design and are constructed utilizing heavy duty anodized aluminum extrusions and support structures. The conveyor beams feature T-Slot configurations along the entire length, allowing for complete interchangeability with a wide range of modular support structure, automation, and guide rail components. Tekno conveyor systems can be built and installed quickly, and later reconfigured using readily available stock components.

Tekno Inc. is a company that, when it comes to manufacturing, assembling, and other process, we will exceed all your expectations. We feel your company deserves the best. Check out our website [www.tekno.com](http://www.tekno.com).
